

RE: RESTORATION BEAR RIVER  
8/22/55 Continued

-4-

Discussion then shifted as to the length of time necessary to work out the determination of whether proper filings can be made. It was agreed that by September 15, 1955 this office would be advised by the Bureau of Reclamation or the Water and Power Board as to whether the necessary filings can be made. The Bureau will be ready by September 15, 1955 to state whether they are ready to prepare the necessary filings.

Discussion then shifted to restoring the Weber River. After a brief discussion it was stated that the Bureau of Reclamation is now in the process of having prepared all the necessary filings to protect the Weber Basin Project. As soon as such filings are ready, further action will be taken toward restoring the Weber River.

Discussion then shifted to the proposed segregation Application No. 14527-c, filed by the Utah Water and Power Board to segregate 260 acre-feet of water on Cottonwood Creek, tributary to Weber River. Arguments were made for and against the proposed segregation, however, no definite conclusion was reached. No further business was presented, therefore the meeting was adjourned by Mr. Tracy.
